Errata

Please note that in this publication, "Disparities in mental health and its determinants among Québec high school students by language of instruction ", a specification was omitted about the nature of the denominator for two indicators.

The indicator "Medication taken for depression or anxiety in the previous 2 weeks" is presented among those who had received a medical diagnosis of depression or anxiety.

Similarly, the indicator "Medication taken to calm down or focus in the previous 2 weeks" is presented among those who had received a medical diagnosis of attention deficit disorder with or without hyperactivity.

Those specifications were added in pages 1, 4, 12, 14, 25, 26, 29, 37 and 38 of the document.
